Dear North Park Students,

North Park has partnered with SHIELD Illinois to implement a more robust COVID-19 surveillance testing program for the Spring semester, and we need your help!

SHIELD Illinois is a saliva-based testing program developed by the University of Illinois. An important part of this testing program is to surveil the student population, and North Park’s goal is to test approximately 10-20% of our student body each week. To aid in planning and compliance, the same pool of students will be tested each week. The resident student testing pool should include participants from all areas of resident living on campus, including both residence halls and apartments.

This is largely a first-come, first-serve opportunity. For more details, please review the Surveillance Testing Program Application. If you are interested in participating all you have to do is complete the form and wait to hear back from the NPU Covid Care Team.

Questions? Please send them to covidcare@northpark.edu.

Thank you,

NPU Pandemic Response Team
